## SENSORS AND SYSTEMS FOR MONITORING GROWING PLANTS

# **DE-1M**Dendrometer

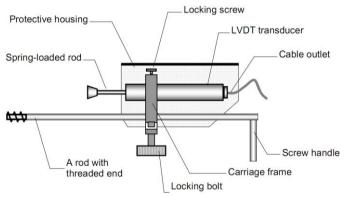

www.phyto-sensor.com

#### Introduction

The DE-1M Dendrometer is a highly precise incremental LVDT-based sensor for monitoring micro-variations of trunk radius in micron range.

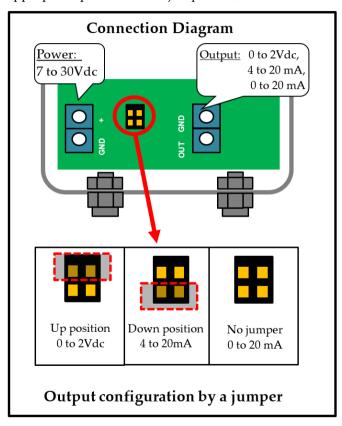

The sensor includes a linear displacement transducer (LVDT) mounted on a special rod with threaded end. When the rod is anchored inside the trunk, the LVDT rod follows movement of the trunk surface. The output signal follows the variation of distance between trunk surface and the anchored end of the rod.

The probe is connected by a standard 2-meter cable to the waterproof box with the signal conditioner inside. A signal conditioner provides excitation of the LVDT and production of standard linear output signal.

#### Connection

Please use a four-core cable with 3 to 6 mm outer diameter. Select the desired type of analog output by appropriate position of the jumper XP1, XP3 as follows:

Maximal length of the output cable is 10 m for sensors with voltage output and up to 200 m for sensors with 4 to 20 and 0 to 20 mA outputs.

#### Installation

- In trees with rough bark over the cambium, rasp it away and pare down carefully an area of about 6 L × 5 W cm<sup>2</sup>. In caulis and species with smooth bark, no preparation may be needed.
- Drill the hole with the 3.3 3.5 mm bits. It is recommended to drill slowly using a wood drill set to a low torque to prevent excessive tearing of wood fibers along the length of hole. The depth of hole must be 3 cm min. and 9 cm max.
- Free the locking bolt and remove the rod from the carriage frame.
- Carefully screw the rod into the tree. If there
  is difficulty in insertion, clear the hole carefully with
  the drill bit.
- Once the rod is implanted, set the sensor on the rod and adjust its position until the butt of spring-loaded rod touches the trunk.
- Readjust the sensor when its readings become close to 0 or 10 mm.

#### Calibrations table

V	mA	mm
0	4	0
2	20	10

#### Calibrations equations

**DE-1M** model:  $\Delta R = 5 \times U$ 

**DE-1Mi** model:  $\Delta R = 0.625 \times I - 2.5$ 

Where  $\Delta R$  – trunk radius variations

U – output voltage in Volts

 ${f I}$  – output current in mA

### **Specifications**

Measurement linear range (LVDT stroke)	0 to 10 mm	
Trunk diameter range	Above 6 cm	
Output DE-1M DE-1Mi	0 to 2 VDC 4 to 20 mA	
Resolution	0.005 mm	
Operating temperature	0 to 50°C	
Temperature effect	< 0.02% total stroke /°C	
Supply voltage	7 to 30 VDC	
Output auto update time	5s	
Excitation time	1s	
Overall dimensions, mm	90 W × 60 H × 23 D	
Carrying rod, mm	160 L × 4 ∅	
Threaded end, mm	10 L × 5 Ø	
Cable length between probe and signal conditioner	2 m	

#### **Customer Support**

If you ever need assistance with your sensor, or if you just have questions or feedback, please e-mail at <a href="mailto:support@phyto-sensor.com">support@phyto-sensor.com</a>. Please include as part of your message your name, address, phone, and fax number along with a description of your problem.
